##ÿÿ#####ÿÿ#ÿÿ#d#####Z#(#####uObjectiveThis ACTD will address integrated collection management at the levels of CINC, Theater, and below (down to Division) with interfaces to the National systems. The Integrated Collection Management tools will interface with existing collection management tools for individual collectors and with some existing cross platform/cross discipline tasking tools. This ACTD will address SIGINT, IMAGERY, MASINT, and other sensors. National, airborne (both manned and unmanned), seaborne and terrestrial collectors will be addressed. The mission is to provide the Commander with tools to best utilize his collection assets and to give him knowledge of what these assets are doing. Technology The technology is complex software due to the number of interfaces and constraints imposed by the diversity of collection systems. The main stream tools are extensions of existing or planned software systems. These extensions are within the current state of the art. The more difficult aspects will be adding sophisticated tools to do Strategy to Task assistance, tasking optimization and cross platform/cross mission tasking. Research will be required in these areas with new techniques fed into the main stream tools as they become available. Lead Service and User SponsorThe lead Services for this ACTD will be the Army and Air Force, and the User Sponsor will be ACOM. The acquisition agent is the Defense Intelligence Agency (DIA). ScheduleThe first prototype will be completed at the end of FY97. The second prototype will be completed in the second quarter of FY98. Final delivery of the system is planned for the fourth quarter of FY99.##
